AMENDMENTS TO THE SPECIFICATION:

Please REPLACE the Abstract of the Disclosure with the following amended Abstract of the Disclosure:

A method for producing a ceramic electronic part includes forming a plurality of internal electrodes arranged in a ceramic sintered compact, superimposed via a ceramic layer. The free ends of the internal electrodes are formed to have a wedge-like cross-sectional shape, with the length L of the wedge and the internal thickness t of the electrode at the base of the wedge satisfying the relationship $L > 2t$ so that there is no risk of generating inter-layer peel-off or delamination in the ceramic layers.
